

**American  
Red Cross**

# **INTERCEPT Fibrinogen Complex**

**The American Red Cross offers INTERCEPT Fibrinogen Complex, available to treat and control bleeding associated with fibrinogen deficiency.**

IFC contains fibrinogen, factor XIII and von Willebrand factor, required for clot strength and hemostasis in patients with massive hemorrhage. IFC can be thawed and stored for 5 days, enabling hospitals to reduce time to transfusion and help minimize product waste.

When patient care is critical, prepare for immediate response with INTERCEPT Fibrinogen Complex—a new development in transfusion medicine.

## **Product Description:**

- FC15
- Pooled Fibrinogen Complex, pathogen reduced
- 4-donor pools with same ABO
- 120 mL volume
- 1,457 mg average fibrinogen content at thaw
- 12-months frozen shelf-life
- 5-day post-thaw shelf life

## **Product Codes:**

- Pooled Fibrinogen Complex | Cryoprecipitated | Psoralen Treated: EA490V00

## **Ordering Requirements:**

- Scheduled orders only
- Order increments of 10 or 24 units
- Orders will be a mix of types, A, B & O
- No returns

## **Shipping Information:**

- Ground delivery via scheduled delivery route
